ABSTRACT

During two periods, 1979 – 1986 and 2011 – 2016, the faunistic research of weevils (Coleoptera: Curculionoidea) of the Cerová vrchovina Highlands in south Slovakia was conducted. Altogether 540 species of Curculionoidea (excepting Anthribidae, Platypodinae and Scolytinae) are reported from the area of the study. Out of this total, 498 species were collected by the author. Additionally, 42 species were recorded based on literature data and specimens collected by other entomologists. The total number of species represents 53.5 % of all species of Curculionoidea (excepting Anthribidae, Platypodinae and Scolytinae) recorded from Slovakia up to 2010. Samples were collected on 37 collecting sites; the diversity, the dominance, and the similarity were evaluated on 28 selected sites with more than 19 recorded species. Both periods were compared concerning species with southern distribution occurring in Slovakia. Ten species collected exclusively in 2011 – 2016 were recognized as especially important range-expanding species spreading northwards through the Pannonian basin up to Slovakia apparently due to climate change.

The fauna of Curculionoidea of Slovakia is relatively well known. However, this is not the truth for the region of the Cerová vrchovina Highlands.

From the historical point of view, Kuthy (1900) catalogized arthropods from the Hungarian part of Austria-Hungary, however, without any record from the study area. The first comprehensive catalogue of Slovak and Carpatho-Ukrainian beetles (Coleoptera) was published by Roubal (1937 – 1941). This catalogue was later supplemented by Havelka (1965). Both authors reported many data on Slovak Curculionoidea; however, almost no data were quoted from the studied area. The

Curculionoidea of the area remained very poorly investigated for many years except Hlisníkovičský (1965), who reported several apionines from Fiľakovo, some of them requiring confirmation. Franc (1995) reported from the study area several weevil species and subsequently (Franc 1997) rare or interesting species of other beetles and arachnids. The fauna of flea beetles of the Cerová vrchovina Highlands was thoroughly studied by Ouda et al. (2013). Balázs et al. (2020) reported four rare beetle species from the study area. The Orthoptera of the study area were studied by Šušlík & Krištín (1995), the sawfly fauna by Balázs & Haris (2020),

and the cavernicolous invertebrate fauna by Papáč et al. (2009).

As other arthropods concerns, recently, Mašán & Mihál (2009) edited several authors' detailed original research of various arachnids in the area.

An overview dealing with many aspects of the Čerová vrchovina Highlands Protected Landscape Area was edited based on the Hungarian original (G. Kiss) by Gaálóvá (2010). This overview also mentions several common species of Curculionoidea. Data on Curculionoidea of former Czechoslovakia, partially based also on unspecified data from the area under the current investigation, were summarized in a comprehensive annotated catalogue of Czech, Moravian, Silesian and Slovak Curculionoidea (Benedikt et al. 2010).

Hence, except several individual faunistic communications mentioned here in the List of recorded species, there was no comprehensive summarizing publication dealing with Curculionoidea of the Čerová vrchovina Highlands until now. The aim of this study was to carry out a detailed faunistic research of this hitherto poorly known area, evaluate several parameters of weevil communities on 28 study sites in the area, and assess their changes during the study taking place over a time span of almost 40 years.

MATERIAL AND METHODS

Collecting sites (Fig. 1). The area of investigation is delimited as follows: Northern border is defined by the river Ipel' from the westernmost point where it joins with the Hungarian border to its crossing with the national road E58, then by E58 up to its crossing with the river Rimava in Rimavská Sobota, finally by the river Rimava to the point where it leaves Slovakia. Southern border is formed by the Hungarian border.

Each collecting site is correspondingly numbered in the below list and in the map (Fig. 1). Site numbers are ordered from the westernmost to the easternmost one. Sites with more than 19 recorded species are marked with an asterisk, and references to photographs of their predominating biotopes are given (Figs 2 – 29). A short description of the habitat type and the vegetation, GPS coordinates, the elevation, and the number of visits (CT = collecting trips) are specified. GPS coordinates were collected with an accuracy of 0.1 minute. Actual collecting sites may be situated hundreds of meters away from the reported GPS location.

1. Rapovce – Mesophilous to moderately hygrophilous meadow along the torrent with *Populus nigra* L., *Salix* spp., *Prunus padus* L., *Urtica dioica* L., *Lamium purpureum* L., *Leontodon taraxacum* L. GPS: N 48°15.8' E 19°41.5'; elevation 180 m a. s. l.; CT: 1.

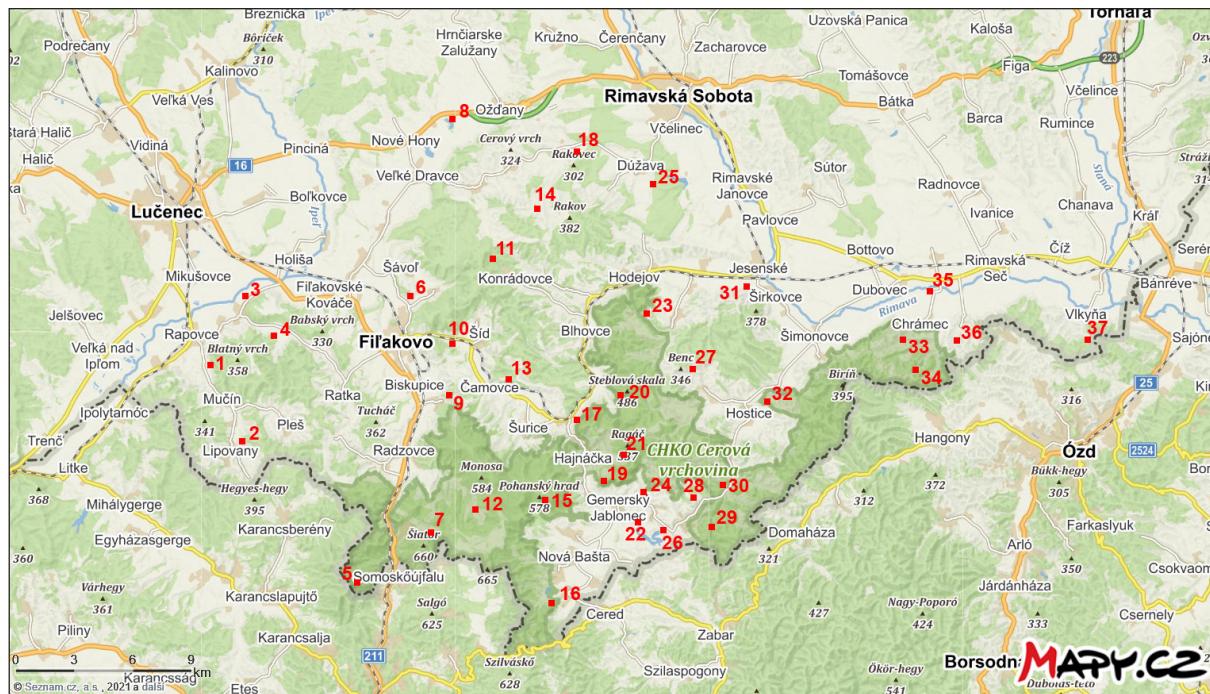

Figure 1. Map of the study area. Each collecting site is indicated by the red square and numbered correspondingly to the particular locality number.

2. Lipovany* (Fig. 2) – Degraded ruderal site with the quarry nearby with *Verbascum densiflorum* Bertol., *Melilotus albus* Medik., *Lotus corniculatus* L., *Inula* sp., *Betula pendula* Roth, *Crataegus* sp., *Ononis spinosa* L., *Centaurium* sp.; mesophilous meadow, wet torrent banks merged with marshy places supporting *Salix* sp., *Lythrum* sp., *Scrophularia nodosa* L., *Althaea officinalis* L., *Prunus spinosa* L. GPS: N 48°13.5' E 19°42.8'; elevation 200 m a. s. l.; CT: 3.

3. Trebel'ovce – Hygrophilous meadow on the alluvium of the Ipel' River, small lake bordered by *Salix* spp., hygrophilous vegetation of *Butomus umbellatus* L., *Lysimachia vulgaris* L., *Lythrum salicaria* L., *Vicia* spp., *Lathyrus pratensis* L. GPS: N 48°17.8' E 19°43.6'; elevation 170 m a. s. l.; CT: 2.

4. Dolná Baba* (Fig. 3) – Field edge at the north-facing forest margin, *Acer campestre* L., *Fagus sylvatica* L., *Corylus avellana* L., semiruderal to meadow habitats with *Sambucus nigra* L., *Urtica dioica*, *Lamium maculatum* (L.) L. GPS: N 48°16.3' E 19°44.3'; elevation 190 m a. s. l.; CT: 1.

5. Karanč – Submontane Fagetum on the hilltop, clearings with *Rumex* sp., *Urtica dioica*, *Trifolium* spp. GPS: N 48°09.4' E 19°47.7'; elevation 610 m a. s. l.; CT: 1.

6. Kerčík* (Fig. 4) – South-facing slope of the Kerčík Hill, semiprimeval steppe-forest vegetation with solitary *Quercus cerris* L., *Crataegus* sp., *Rosa* sp., in ground layer *Centaurea stoebe* L., *Inula* sp., *Trifolium arvense* L., strongly invaded by *Robinia pseudoacacia* L.; ruderalized places with *Melilotus officinalis* (L.) Lam., *Medicago* sp., very common *Linaria vulgaris* Mill. GPS: N 48°17.6' E 19°49.9'; elevation 260 m a. s. l.; CT: 2.

7. Šiatorská Bukovinka* (Fig. 5) – North-facing slopes of the Šiator Hill, Fageto-Carpinetum (*Carpinus betulus* L., *Fagus sylvatica*) with scattered *Quercus cerris*; *Populus tremula* L., *Salix* sp., *Corylus avellana*, *Betula pendula*, *Centaurea jacea* L., *Viola* sp. at the forest margin. GPS: N 48°11.0' E 19°50.8'; elevation 370 m a. s. l.; CT: 2.

8. Ožďany* (Fig. 6) – Pond banks at foothills of hangs supporting semiruderal habitats, hygrophilous vegetation, *Scirpus* sp., *Symphytum officinale* L., *Salix* spp. common along banks, *Tripleurospermum maritimum* (L.) W. D. J. Koch in ruderal places, hangs supporting more natural flora as *Allium* sp. GPS: N 48°22.4' E 19°51.3'; elevation 200 m a. s. l.; CT: 1.

9. Belina* (Fig. 7) – Semiprimeval steppe-forest habitat on the south-facing slope, the hilltop with grasses, *Pyrus communis* L., *Ulmus minor* Mill., *Pinus sylvestris* L., *Quercus* sp., *Crataegus* sp., *Prunus spinosa*, *Ligustrum vulgare* L., *Rosa* sp. in the canopy and shrub layers, *Nonea pulla* DC., *Trifolium* spp., *Medicago* sp., *Cytisus* sp. in the ground layer,

Artemisia campestris L., *Polygonum aviculare* L., *Urtica dioica*, *Atriplex* sp., *Papaver rhoeas* L., *Consolida regalis* Gray in ruderal places, some places strongly invaded by *Robinia*. GPS: N 48°14.6' E 19°51.9'; elevation 300 m a. s. l.; CT: 5.

Figure 2. Lipovany (study site No. 2) – Degraded ruderal and semiruderal habitats, mesophilous meadow, and torrent banks.

Figure 3. Dolná Baba (study site No. 4) – Hangs with non-primeval vegetation between the forest margin and semiruderal to meadow habitats.

Figure 4. Kerčík (study site No. 6) – South-facing hangs of the Kerčík Hill supporting semiprimeval steppe-forest vegetation.

10. **Šíd*** (Fig. 8) – Marshes on the alluvium of the stream Čamovský potok with *Salix* spp. (scattered *S. caprea* L.), *Phragmites australis* (Cav.) Steud., *Scirpus* sp., *Sympyton officinale*, *Urtica dioica*, *Lythrum salicaria*, *Ranunculus acris* L., *Rumex* sp., *Lysimachia vulgaris*, *Lathyrus pratensis*, *Artemisia vulgaris* L., *Potentilla* spp. GPS: N 48°16.2' E 19°52.1'; elevation 200 m a. s. l.; CT: 6.

11. **Čenta** – The saddle between hills supporting *Fagetum* with intermixed *Carpinus betulus*, and *Mercurialis perennis* L., *Viola* sp. in the forest floor. GPS: N 48°18.5' E 19°52.7'; elevation 460 m a. s. l.; CT: 1.

12. **Obručná*** (Fig. 9) – Valley with semiprimeval *Querceto-Carpinetum*, scattered *Populus tremula*, solitary *Salix caprea*, *Alnus glutinosa* (L.) Gaertn. and *Salix* spp. along the torrent, *Cardamine pratensis* L. in the mesophilous meadow, *Sympyton officinale* in the forest floor, *Pyrus communis*, and *Prunus spinosa* on hangs. GPS: N 48°11.4' E 19°52.9'; elevation 380 m a. s. l.; CT: 3.

13. **Čamovce*** (Fig. 10) – South-facing loess and sand hangs with *Pinetum* (*Pinus sylvestris*) strongly invaded by *Robinia*; *Centaurea stoebe*, *Potentilla* sp., *Astragalus onobrychis* L., *Nonea pulla*, *Echium vulgare* L., *Anchusa officinalis* L., *Carduus* sp., *Artemisia campestris*, *Reseda* sp., *Melilotus officinalis*, *Dorycnium* sp., *Salvia pratensis* L. in steppe to semi-ruderal places. GPS: N 48°15.0' E 19°53.8'; elevation 220 m a. s. l.; CT: 4.

14. **Lukva*** (Fig. 11) – South-facing slopes with steppe to steppe-forest, *Crataegus* sp., *Rosa* sp., *Melilotus officinalis*, *Medicago minima* (L.) L., *Vicia* spp., *Lotus corniculatus*, *Centaurea stoebe*, *Cirsium eriophorum* (L.) Scop., *Artemisia vulgaris*, *Carlina vulgaris* L., *Salvia aethiopis* L.; hygrophilous meadow with *Carex* sp., *Sympyton officinale*, *Lythrum salicaria*. GPS: N 48°19.9' E 19°55.3'; elevation 300 m a. s. l.; CT: 8.

15. **Pohanský hrad*** (Fig. 12) – South-facing slopes and the hilltop plateau of the Pohanský hrad Hill supporting the primeval to semiprimeval steppe-forest with predominant *Quercus cerris*; the xerothermophilous to mesophilous forest in the shrub and canopy layers formed by *Carpinus betulus*, *Quercus robur* L., *Pinus sylvestris*, *Pyrus communis*, *Rosa* sp., *Populus tremula*, locally *Euonymus europaeus* L., *Prunus spinosa*, *Acer campestre*; the steppe-forest, the forest and meadows in the ground and flor layers with *Dorycnium pentaphyllum* Scop., *Verbascum phoeniceum* L., *Rumex* sp., *Centaurea jacea*, *C. stoebe*, *Juncus* sp., *Ranunculus* sp., *Primula* sp., *Viola* sp.; the hilltop plateau in shaded places locally with *Fagus sylvatica*. GPS: N 48°11.9' E 19°55.4'; elevation 310 – 560 m a. s. l.; CT: 6.

16. **Tachty*** (Fig. 13) – East- and south-facing loess and sand hangs supporting the steppe formed by *Centaurea stoebe*, *Tanacetum vulgare* L.,

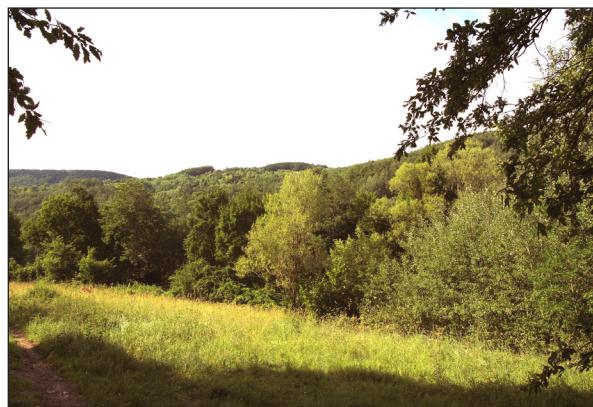

Figure 5. Šiatorská Bukovinka (study site No. 7) – North-facing slopes of the Šiator Hill with Fageto-Carpinetum and mesophilous meadows.

Collecting and depositing samples

The research was carried out during two periods 1979 – 1986 and 2011 – 2016. Collecting methods were focused on phytophagous Coleoptera, especially weevils. The main methods were the general and targeted sweeping various vegetation, the general and targeted beating shrubs and trees, the sifting of the litter under deciduous trees and the ground in steppe and steppe-forest habitats, the individual collecting, and additionally also the underwater sweeping using the aquatic insect collecting net. All specimens were identified by the author under the stereomicroscope Intraco Micro NSZ-810 unless reported otherwise (data from other collectors). Rare or noteworthy species were dry mounted, often with dissected genitalia; the rest was stored dried in paper tubes. Mounted specimens are deposited in collections abbreviated in the List of recorded species as follows:

BO Roman Borovec, Sloupno, Czech Republic
BT Stanislav Benedikt, Plzeň, Czech Republic
CK Petr Čížek, Žamberk, Czech Republic
CMNC Canadian Museum of Nature, Ottawa, Canada
FG Christoffer Fagerström, Häljarp, Sweden
KO Michael Košťál, Šoporňa, Slovakia
KP Tomáš Kopecký, Hradec Králové, Czech Republic
KY Jiří Krátký, Hradec Králové, Czech Republic
MHK Muzeum východních Čech, Hradec Králové, Czech Republic
PL Filip Pavel, Hradec Králové, Czech Republic
PN Jan Pelikán, Hradec Králové, Czech Republic

List of recorded species

The taxonomic nomenclature, classification of species, and the assumed phylogenetic order of higher taxa follows the catalogue by Alonso-Zarazaga et al. (2017) with two exceptions. *Phyllobius vespertinus* (Fabricius, 1792) and *Polydrusus thalassinus* Gyllenhal, 1834 are regarded as valid species without doing here new taxonomic acts. After each species name, the page number referring to a particular species in the above catalogue is reported.

At each species name, the main distribution area according to the assessment of distribution based on Alonso-Zarazaga et al. (2017) is mentioned (DIS). Zoogeographical realms and subregions are abbreviated and defined as follows: Orb = worldwide distribution, Hol = Holarctic (Palaearctic and Nearctic realms), Pal = Palaearctic, WPa = West Palaearctic (Palaearctis eastwards from Europe to Johanssen

line up to the west of Mongolia according to Lattin (1967) comprising at least a part of North Africa), EuA = Eurasian region, i. e., Eurosiberian region with adjacent territories excluding North Africa, Eur = European region, Sub = Subendemic, occurring exclusively in several neighbouring countries. The zoogeographical evaluation of the studied area as a whole was performed by counting all recorded species, each assigned to a particular distribution type. The zoogeographical composition was finally summarized in a graph.

Furthermore, biological notes on each species (BIO) based on the author's and other collectors' observations, and on published data from the studied area are reported.

Records are divided into three independent categories that are all taken in consideration in evaluating the total species number and the zoogeographical composition of the area as a whole. The category of external data (EXT) comprises reliable published data, reliable data from other collectors, and the author's own data gained during field trips outside two main periods of sampling. EXT were reported only in cases when author's own data from two main periods were less than five or EXT locality was different from that by the author, both conditions excepting rare or noteworthy species. Two remaining categories are the first main period dated 1979 – 1986, and the second one dated 2011 – 2016. Localities including EXT are alphabetized, dates at particular localities are ordered chronologically according to the date, regardless of the year. If not reported otherwise, each datum in all three categories is based on specimens collected (leg.), deposited (coll.) and identified (det.) by the author.

Assessment of effects of climate change

To illustrate differences in the composition of weevil communities between two main sampling periods 1979 – 1986 and 2011 – 2016, species with the southern distribution pattern ("Southern") were defined, and their occurrence in both periods was compared. Exclusively self-collected material from both periods was used. "Southern" species had to meet the following criteria: Their main distribution area is Pontic, Mediterranean, Anatolian or Central Asian biogeographic region or any combination of mentioned regions; however, they may occur also in some southern parts of adjacent regions excluding Scandinavia, north of European Russia and Siberia. Widespread species meeting the above criteria but commonly occurring also in East Asia were not regarded as "Southern".

The number of "Southern" species was compared between both periods. The hypothesis that the period 2011 – 2016 has a significantly higher number of "Southern" species was tested by Chi-Square Test Calculator, Social Science Statistics (<https://www.socscistatistics.com/calculator/chi-square-test/>)

www.socscistatistics.com/tests/chisquare2/default2.aspx.

Data evaluation

For the data evaluation, exclusively self-collected specimens from the period 2011 – 2016 were used. It was due to non standardized collecting methods and conditions (exact location of sites, sampling methods, and instruments...) in 1979 – 1986 and external data (EXT). Sites with 19 and less recorded species were excluded from the evaluation so that data from 28 collecting sites were processed and involved in the evaluation. Three parameters were evaluated: the dominance, the diversity, and the similarity.

For an assessment of the dominance, five limiting percentage ranges according to Losos et al. (1984) were used: eudominant (> 10 %), dominant (5 – 10 %), subdominant (2 – 5 %), recedent (1 – 2 %), subrecedent (< 1 %). The relative abundance (in %) was calculated for each species and collecting site. A specific numeric dominance coefficient was attributed to each category except subrecedent, i.e., each species with the relative abundance higher than 1 % was included in the calculation. Specific dominance coefficients were attributed as follows: eudominant (eud) = 10, dominant (dom) = 5, subdominant (sub) = 2.5, recedent = 1.25 (rec). The total specific dominance coefficient (TSDC) was calculated for each species with a relative abundance higher than 1 % as a sum of specific dominance coefficients from all 28 sites. Eventually, species were sorted in the descendent order according to their TSDCs.

The diversity was ascertained as Shannon-Wiener (SWI), Simpson's (SDI), and Margalef Diversity Indices (MDI) using the Biodiversity Calculator, Al Young Studios (accessed June 2021) (https://www.alyoung.com/labs/biodiversity_calculator.html). Finally, the equitability (EQY) was calculated for each particular study site based on the number of species on the site (N) and its Shannon-Wiener Index value (SWI) ($EQY = N/\ln(SWI)$).

The similarities among study sites were calculated using the Sorenson Similarity Index according to Losos et al. (1984) (not multiplied by 100).

RESULTS AND DISCUSSION

Altogether 540 species of Curculionoidea (excluding Anthribidae, Scolytinae and Platypodinae) were recorded in the study area, which represents 53.5 % of 1009 hitherto confirmed species from Slovakia (Benedikt et al. 2010). Author's self-collected samples during periods 1979 – 1986 and 2011 – 2016 represent 498 (92 %) species. Sixty-one species were collected exclusively in 1979 – 1986, 159 species exclusively in 2011 – 2016, and 278 species

were collected during both periods. During the second period, 8294 specimens were collected. The number of specimens collected in the first period is not precisely enumerated, just estimated over 3,000 as the results from the first period are not quantitatively evaluated. Three most species-rich collecting sites were Gemerský Jablonec (188 spp.), Jestice (132 spp.), and Matrač (124 spp.).

Additionally to the below list of reliably confirmed species, there are some unreliable and/or unconfirmed data of species not collected by the author published by historical or recent authors either from the study area or from its surroundings. Kuthy (1900) reported from Putnok, a site situated in Hungary about 5 km eastwards from the study area, *Mecorthis ungarica* (Herbst, 1783), *Cyanapion gyllenhalii* (Kirby, 1808), *Malvaevora timida* (Rossi, 1792), *Dodecastichus geniculatus* (Germar, 1817), and *Liparus dirus* (Herbst, 1795). These species very probably occur also in the study area. Moreover, this author reported from the same locality some more or less improbable faunistic records presumably based on misidentifications (*Helianthemapion aciculare* (Germar, 1817), *Cyanapion alcyoneum* (Germar, 1817), *C. spencii* (Kirby, 1808), *Eutrichapion facetum* (Gyllenhal, 1839), and *Sphenophorus abbreviatus* (Fabricius, 1787)). The same author reported from Vieska nad Blhom, a site situated in Slovakia about 5 km northwards from the study area, *Aspropartenis punctiventris* (Germar, 1823), a species very likely occurring also in the study area. Hlisníkovský (1965) reported *Alocentron curvirostre* (Gyllenhal, 1833) and *Pirapion immune* (Kirby, 1808) from Fiľakovo. The former species is very probably a correct datum, whereas the latter one is almost certainly based on the misidentification. Franc (1995) reported from the study area following three species: *Bothynoderes affinis* (Schrank, 1781), *Lixus albomarginatus* Boheman, 1842, and *Liparus coronatus* (Goeze, 1777). All three species are possible to occur in the area. All the above mentioned species were not involved in this study.

List of recorded species

Family Nemonychidae Bedel, 1882

Cimberis attelaboides (Fabricius, 1787) 17
DIS: WPa. BIO: beaten from *Pinus sylvestris*.
2011 – 2016: Gemerské Dechtáre: 1.v.14, 1 ♀.

Doydirhynchus austriacus (Olivier, 1807) 17
DIS: Eur. BIO: beaten from *Pinus sylvestris*.
2011 – 2016: Belina: 28.iii.14, 2 ♂♂ 1 ♀.

Nemonyx lepturoides (Fabricius, 1801) 17
DIS: Eur. BIO: exclusively sweeping *Consolida regalis*.
1979 – 1986: Jesenské-Barta: 3.vi.83.
2011 – 2016: Belina: 7.vi.15, 1 ♂ 2 ♀♀; Gemerský Jablonec: 18.vii.13, 1 ♀; Matrač: 24.vi.12, 2 ♂♂ 4 ♀♀; 29.vi.13, 2 ♀♀.

Family Attelabidae Billberg, 1820

Apoderus coryli (Linnaeus, 1758) 37

DIS: EuA. BIO: beaten from *Corylus avellana*.
1979 – 1986: Ragáč: 9.v.79.

2011 – 2016: Jestice: 9.vi.14, 1 ♂; 10.vii.16, 1 ♀.

Attelabus nitens (Scopoli, 1763) 44

DIS: EuA. BIO: beaten from *Quercus* spp.
1979 – 1986: Fiľakovo: 28.v.86; Jesenské-Barta:
3.vi.83; Matrač: 3.vi.82; Ragáč: 9.v.1979.

Byctiscus betulae (Linnaeus, 1758) 52

DIS: EuA. BIO: beaten from *Salix* sp.
1979 – 1986: Kalonda: 29.viii.81.

2011 – 2016: Tachty: 29.iii.14, 1 ♂.

Byctiscus populi (Linnaeus, 1758) 53

DIS: EuA. BIO: no data.
EXT: Matrač: 28.viii.83 (BO leg. coll. det.).

Deporaus (Deporaus) betulae (Linnaeus, 1758) 56

DIS: Pal. BIO: no data.
EXT: Tachty: 27.vi.20 (PL leg. coll., KY det.).

1979 – 1986: Matrač: 16.iv.81.

Involvulus (Teretriorhynchites) icosandriae (Scopoli, 1763) 61

DIS: Eur. BIO: sifting, beating *Malus pumila* Mill. and *Pyrus communis*.

1979 – 1986: Matrač: 16.iv.81; 13.ix.80; Ragáč:
12.vi.83; Steblová skala: 17.iv.81.

2011 – 2016: Belina: 28.iii.14, 1 ♂ 1 ♀; Čamovce:
20.xii.11, 1 ♂; Janice: 29.iii.12, 1 ♂; 18.iv.12, 2 ♂♂;
Ľukva: 20.iv.16, 2 ♀♀; Vlkýňa: 16.xii.12, 1 ♀.

Lasiorhynchites (Coccygorrhynchites) sericeus (Herbst, 1797) 62

DIS: WPa. BIO: no data.
EXT: Gemerský Jablonec: 21.v.16 (Staněk leg. coll.,
KY det.); Steblová skala: 26.iv.83 (BO leg. coll. det.).
1979 – 1986: Jesenské-Barta: 3.vi.83; Matrač:
16.iv.81.

Lasiorhynchites (Nelasiorhynchites) comatus (Gyl-
lenhal, 1833) 62

DIS: WPa. BIO: no data.
EXT: Jestice: 27.v.06 (PL leg. coll., KY det.); Steblová
skala: 26.iv.83 (BO leg. coll. det.).

Lasiorhynchites (Lasiorhynchites) cavifrons (Gyllen-
hal, 1833) 62

DIS: WPa. BIO: no data.
1979 – 1986: Fiľakovo: 28.v.86; Ragáč: 9.v.79; Steb-
lová skala: 17.iv.81.

*Neocoenorrhinus (Neocoenorrhinidius) interpuncta-
tus* (Stephens, 1831) 64

DIS: WPa. BIO: no data.
EXT: Tachty: 7.v.07 (PL leg. coll., KY det.).

Neocoenorrhinus (Neocoenorrhinidius) pauxillus
(Germar, 1823) 64

DIS: EuA. BIO: beaten predominantly from *Cratae-
gus* sp.

1979 – 1986: Fiľakovo: 28.v.86; Matrač: 16.iv.81.

2011 – 2016: Gemerský Jablonec: 19.iv.15, 1 ♀; Ja-
nice: 18.iv.12, 1 ♂; 20.iv.16, 1 ♀; Lipovany: 21.iv.16,
1 ♀; Obručná: 18.iv.12, 1 ♂ 1 ♀; Pohanský hrad:
21.iv.16, 1 ♂ 2 ♀♀; 11.vi.11, 1 ♀.

Neocoenorrhinus (Neocoenorrhinus) germanicus
(Herbst, 1797) 64

DIS: EuA. BIO: beaten from various shrubs.
1979 – 1986: Jesenské-Barta: 17.vi.85.
2011 – 2016: Gemerský Jablonec: 19.iv.15, 1 ♂; Hos-
tice: 4.v.13, 1 ♂; Matrač: 2.v.14, 1 ♀; Vlkýňa: 12.v.12,
1 ♀.

Neocoenorrhinus (Schoenitemnus) minutus (Herbst,
1797) 64

DIS: WPa. BIO: beaten from *Quercus* spp.
1979 – 1986: Jesenské-Barta: 30.iii.84; Ragáč:
5.iv.80.

2011 – 2016: Gemerský Jablonec: 13.iii.14, 1 ♀;
19.iv.15, 1 ♂ 1 ♀; Jesenské-Barta: 26.iii.14, 9 ♂♂
7 ♀♀ (*Q. cerris*, *Q. robur*); Jestice: 14.iii.14, 3 ♂♂ 5
♀♀ (*Q. cerris*); 18.iv.15, 1 ♂ (*Q. cerris*); 27.iv.13, 1 ♀;
Tachty: 29.iii.14, 1 ♀ (*Q. cerris*).

Rhynchites (Epirhynchites) auratus (Scopoli, 1763)
65

DIS: EuA. BIO: general beating.
2011 – 2016: Pohanský hrad: 6.vi.16, 1 ♂.

Rhynchites (Epirhynchites) giganteus Schoenherr,
1832 65

DIS: EuA. BIO: beaten from *Pyrus communis* after
efflorescence.

2011 – 2016: Hostice: 14.v.11, 1 ♂.

Rhynchites (Rhynchites) bacchus (Linnaeus, 1758)
66

DIS: WPa. BIO: beating blossoming *Pyrus communis*.
1979 – 1986: Ragáč: 9.v.79.

2011 – 2016: Gemerský Jablonec: 19.iv.15, 2 ♂♂;
Ľukva: 20.iv.16, 2 ♂♂ (*P. communis*).

Tatianaerhynchites aequatus (Linnaeus, 1767) 66

DIS: EuA. BIO: mostly beating *Crataegus* spp.
1979 – 1986: Fiľakovo: 28.v.86; Ragáč: 30.v.80.

2011 – 2016: Čamovce: 29.iv.11, 1 ♀; Gemerský Jab-
lonec: 27.iv.13, 1 ♂; 24.v.13, 1 ♂ 1 ♀; Janice: 20.iv.16,

- Limnobaris t-album* (Linnaeus, 1758) 120
DIS: WPa. BIO: general sweeping in hygrophilous meadows.
1979 – 1986: Hajnáčka-Hangoň: 12.vi.83; Jesenské-Barta: 3.vi.83; 17.vi.85.
2011 – 2016: Jesenské-Barta: 14.v.11, 1 ♂; 20.v.15, 1 ♂; Jestice: 27.iv.13, 1 ♂; Šíd: 10.vi.11, 1 ♀.
- Aulacobaris caerulescens* (Scopoli, 1763) 121
DIS: WPa. BIO: general sweeping.
EXT: Čamovce: 26.iv.83; Hajnáčka: 26.iv.83 (BO leg. coll. det.).
1979 – 1986: Jesenské-Barta: 3.vi.83.
- Aulacobaris picicornis* (Marsham, 1802) 122
DIS: Eur. BIO: sweeping *Reseda* spp., under the host plant.
EXT: Gemerský Jablonec: 28.v.16 (BT leg. coll. det.).
1979 – 1986: Ragáč: 30.v.80.
2011 – 2016: Gemerský Jablonec: 16.vii.14, 2 ♀♀ (*Reseda lutea*); 28.ix.13, 2 ♂♂ 6 ♀♀; Matrač: 21.v.12, 1 ♂ 1 ♀.
- Baris (Baris) analis* (Olivier, 1791) 123
DIS: Eur. BIO: sifted in the mesophilous meadow.
2011 – 2016: Višňové: 23.x.15, 1 ♂.
- Baris (Baris) artemisiae* (Panzer, 1794) 123
DIS: EuA. BIO: sweeping *Artemisia vulgaris*.
1979 – 1986: Fiľakovo: 28.v.86; Ragáč: 30.v.80; 12.vi.83.
- 2011 – 2016: Belina: 1.v.14, 3 ♂♂ 2 ♀♀; Čamovce: 29.iv.11, 1 ♂ 1 ♀; Gemerské Dechtáre: 1.v.14, 2 ♂♂ 2 ♀♀; Gemerský Jablonec: 24.v.13, 1 ♂; Janice: 4.v.13, 1 ♂; Jestice: 27.iv.13, 1 ♂ 1 ♀; Ľukva: 6.vi.15, 1 ♂; Matrač: 4.v.13, 1 ♀; 21.v.12, 1 ♂; Šíd: 10.vi.11, 3 ♂♂ 4 ♀♀.
- Cosmobaris scolopacea* (Germar, 1819) 124
DIS: Pal. BIO: sweeping Chenopodiaceae spp.
1979 – 1986: Fiľakovo: 7.viii.82; Ragáč: 21.vii.79.
2011 – 2016: Belina: 16.vii.11, 1 ♂ 3 ♀♀; Gemerský Jablonec: 18.vii.13, 1 ♂; Matrač: 28.vii.12, 2 ♀♀.
- Melanobaris atramentaria* (Bohemian, 1836) 126
DIS: Eur. BIO: sweeping *Erysimum* sp.
2011 – 2016: Tachty: 14.iii.14, 1 ♂; 5.vi.16, 2 ♂♂ 3 ♀♀.
- Amalus scortillum* (Herbst, 1795) 130
DIS: Hol. BIO: exclusively sweeping *Polygonum aviculare*.
1979 – 1986: Jesenské-Barta: 3.vi.83; 17.vi.85; 3.ix.83; Matrač: 3.vi.82; Ragáč: 30.v.80; Steblová skala: 13.vii.81.
2011 – 2016: Belina: 16.vii.11, 2 ♂♂ 2 ♀♀; Bizovo: 21.v.12, 1 ♀; Gemerské Dechtáre: 1.v.14, 1 ♂; Gemerský Jablonec: 27.iv.13, 1 ♂ 1 ♀; 4.v.13, 1 ♂; 15.viii.13, 1 ♂; Janice: 12.v.12, 1 ♀; Jestice: 28.vi.13, 1 ♀; Lipovany: 21.iv.16, 1 ♀; 31.vii.11, 1 ♂; Matrač: 2.v.14, 1 ♂ 1 ♀; Ožďany: 23.vi.12, 1 ♂ 1 ♀; Steblová skala: 13.v.11, 1 ♂; 28.vii.12, 1 ♂ 2 ♀♀; 18.viii.14, 1 ♂; 13.ix.11, 3 ♂♂ 4 ♀♀ (1 immature); 16.x.11, 2 ♂♂ 4 ♀♀; 19.x.12, 1 ♂ 2 ♀♀.
- Calosirus terminatus* (Herbst, 1795) 131
DIS: WPa. BIO: general sweeping, sifting in dry meadows and steppes.
2011 – 2016: Dúžava: 7.vi.16, 1 ♂; Gemerský Jablonec: 19.x.12, 1 ♂; Hostice: 17.x.11, 2 ♀♀; Janice: 4.x.15, 2 ♀♀; Ľukva: 24.vi.15, 1 ♀; Ožďany: 23.vi.12, 1 ♂.
- Ceutorhynchus alliariae* H. Brisout de Barneville, 1860 132
DIS: Eur. BIO: sweeping *Alliaria petiolata*.
EXT: Štiarská Bukovinka: 30.iv.09 (Koloničný leg. coll., KY det.).
2011 – 2016: Matrač: 29.iv.11, 1 ♂ 1 ♀; 12.viii.11, 3 ♀♀.
- Ceutorhynchus assimilis* (Paykull, 1792) 132
DIS: WPa. BIO: general sweeping.
1979 – 1986: Fiľakovo: 28.v.86; Kalonda: 29.viii.81; Matrač: 13.ix.80.
2011 – 2016: Matrač: 21.v.12, 1 ♀; Vlkyňa: 12.v.12, 1 ♀.
- Ceutorhynchus carinatus* Gyllenhal, 1837 133
DIS: WPa. BIO: general sweeping.
EXT: Tachty: 28.v.16 (BT leg. coll. det.).
1979 – 1986: Fiľakovo: 20.vi.83.
2011 – 2016: Matrač: 2.v.14, 1 ♂.

Ceutorhynchus chalybaeus Germar, 1823 132

DIS: Pal. BIO: sifted in the steppe-forest.

1979 – 1986: Steblová skala: 11.ii.81.

2011 – 2016: Gemerský Jablonec: 28.ix.13, 1 ♀.

Ceutorhynchus chlorophanus Rouget, 1858 133

DIS: WPa. BIO: sweeping *Erysimum* sp.

EXT: Tachty: 28.v.16 (BT leg. coll. det.).

2011 – 2016: Tachty: 29.iii.14, 1 ♂; 5.vi.16, 1 ♂ 4 ♀♀.

Ceutorhynchus cochleariae (Gyllenhal, 1813) 133

DIS: Eur. BIO: sweeping in wet meadows.

EXT: Šiatorská Bukovinka: 30.iv.09 (CK leg. coll., KY det.).

1979 – 1986: Steblová skala: 13.vii.81.

2011 – 2016: Obručná: 2.v.14, 1 ♀; Steblová skala: 13.v.11, 1 ♂ 1 ♀.

Ceutorhynchus coerulescens Gyllenhal, 1837 133

DIS: Eur. BIO: sweeping *Lepidium* sp.

EXT: Gemerský Jablonec: 10.v.99 (KY leg. coll. det.).

Ceutorhynchus constrictus (Marsham, 1802) 133

DIS: Eur. BIO: general sweeping.

EXT: Ostrá skala: 27.iv.83 (BO leg. coll. det.).

1979 – 1986: Fiľakovo: 28.v.86; Steblová skala: 13.vii.81.

Ceutorhynchus contractus (Marsham, 1802) 133

DIS: Pal. BIO: general sweeping, sifting.

1979 – 1986: Fiľakovo: 5.x.84; Jesenské-Barta: 16.x.83; Steblová skala: 17.iv.81.

1979 – 1986: Kerčík: 29.viii.80.

2011 – 2016: Jestice: 28.vi.13, 1 ♀; Pohanský hrad: 11.vi.11, 1 ♂ 1 ♀; 13.xi.11, 1 ♂; Steblová skala: 13.v.11, 1 ♂; 8.vi.16, 2 ♀♀.

Otiorhynchus (Otiorhynchus) multipunctatus (Fabricius, 1792) 320

DIS: Eur. BIO: general beating at forest margins.

1979 – 1986: Jesenské-Barta: 3.vi.83; 17.vi.85; Šiatorská Bukovinka: 3.ix.79.

2011 – 2016: Gemerské Dechtáre: 1.v.14, 4 ♂♂ 3 ♀♀; Gemerský Jablonec: 24.v.13, 4 ♂♂ 2 ♀♀; 10.vi.14, 2 ♂♂ 1 ♀; 28.vi.13, 1 ♂ 1 ♀; Jestice: 31.v.15, 2 ♀♀; Obročná: 2.v.14, 2 ♂♂; Pohanský hrad: 11.vi.11, 2 ♂♂ 1 ♀; 13.viii.11, 1 ♂; Steblová skala: 10.vi.14, 1 ♂.

Otiorhynchus (Paracryphiphorus) catenulatus (Panzer, 1795) 322

DIS: Eur. BIO: crawling on the ground.

EXT: Gemerský Jablonec: 7.v.07 (Plecháč leg. coll., KY det.).

2011 – 2016: Malý Belež: 20.v.15, 1 ♀.

Otiorhynchus (Pendragon) ovatus (Linnaeus, 1758)
323

DIS: EuA. BIO: sifting, general sweeping, crawling on the ground.

1979 – 1986: Hajnáčka-Hangoň: 12.vi.83; Kerčík: 29.viii.80; Matrač: 21.x.82; Ragáč: 12.vi.83.

2011 – 2016: Gemerský Jablonec: 23.viii.13, 1 ♀ (dead); Hostice: 17.x.11, 1 ♀; 23.xi.16 2 ♀♀; Jestice: 9.vi.14, 3 ♀♀; 18.vii.13, 1 ♀; Pohanský hrad: 11.vi.11, 2 ♀♀.

Otiorhynchus (Podoropelmus) fullo (Schränk, 1781)
326

DIS: Eur. BIO: beating *Quercus* spp. and other trees, sifting in Quercetum.

1979 – 1986: Matrač: 3.vi.82; Ragáč: 30.v.80.

2011 – 2016: Čenta: 30.v.15, 3 ♀♀; Gemerské Dechtáre: 1.v.14, 1 ♀; Hostice: 4.v.13, 1 ♀; 14.v.11, 1 ♀; Janice: 20.iv.16, 13 ♀♀; 4.v.13, 3 ♀♀; 6.vi.15, 1 ♀; Matrač: 2.v.14, 5 ♀♀; Steblová skala: 13.v.11, 1 ♀; 10.vi.14, 2 ♀♀; Vlkyná: 12.v.12, 3 ♀♀.

Stomodes gyrosicollis Boheman, 1842 336

DIS: Eur. BIO: sifting in steppes.

2011 – 2016: Gemerský Jablonec: 28.ii.14, 1 ♀; 24.v.13, 1 ♀; Lukva: 14.vii.15, 4 ♀♀.

Simo variegatus (Boheman, 1842) 344

DIS: WPa. BIO: sifting at the forest margin.

1979 – 1986: Čamovce: 1.viii.81.

2011 – 2016: Matrač: 2.v.14, 2 ♀♀.

Phyllobius (Dieletus) argentatus (Linnaeus, 1758)
348

DIS: EuA. BIO: beating *Quercus* spp. and other trees.
1979 – 1986: Fil'akovo: 20.vi.83; 28.v.86; Jesenské-Barta: 3.vi.83; 17.vi.85; Matrač: 3.vi.82; Steblová skala: 9.vi.81; 25.vi.80.

2011 – 2016: Antalka: 29.v.15, 1 ♀; Čamovce: 29.iv.11, 1 ♂ 1 ♀; Čenta: 30.v.15, 2 ♂♂ 3 ♀♀; Dolná Baba: 31.v.15, 2 ♀♀; Dúžava: 19.v.15, 10 ♂♂ 12 ♀♀ (*Quercus robur*); 7.vi.16, 2 ♂♂ 5 ♀♀ (*Q. cerris*); Gemerské Dechtáre: 1.v.14, 3 ♂♂ 6 ♀♀; Gemerský Jablonec: 24.v.13, 7 ♀♀; Jestice: 9.vi.14, 2 ♀♀; 28.vi.13, 1 ♀; Matrač: 2.v.14, 7 ♂♂ 3 ♀♀; 21.v.12, 1 ♀; Obročná: 2.v.14, 1 ♀; Pohanský hrad: 6.vi.16, 13 ♂♂ 16 ♀♀; 11.vi.11; 3 ♂♂ 7 ♀♀; Steblová skala: 13.v.11, 1 ♂ 1 ♀; 10.vi.14, 1 ♂ 2 ♀♀.

Phyllobius (Metaphyllum) glaucus (Scopoli, 1763)
349

DIS: WPa. BIO: no data.

EXT: Pohanský hrad: 6.v.07 (KP leg. coll., KY det.).

Phyllobius (Metaphyllum) pomaceus Gyllenhal, 1834 349

DIS: EuA. BIO: sweeping, preferably *Urtica dioica*.
1979 – 1986: Fil'akovo: 28.v.86; Jesenské-Barta: 3.vi.83; 17.vi.85; Ragáč: 30.v.80; 12.vi.83.

2011 – 2016: Antalka: 29.v.15, 3 ♂♂ 7 ♀♀ (*U. dioica*); Dolná Baba: 31.v.15, 6 ♂♂ 4 ♀♀ (*U. dioica*); Dúžava: 19.v.15, 1 ♀; Janice: 12.v.12, 1 ♂; Jestice: 9.vi.14, 1 ♂ (*U. dioica*); Lukva: 20.iv.16, 1 ♀ (*U. dioica*); 6.vi.15; 1 ♂ 3 ♀♀ (*U. dioica*); Steblová skala: 10.vi.14, 1 ♀; Šíd: 10.vi. 1 ♀; Višňové: 30.v.15, 3 ♂♂ 2 ♀♀.

Phyllobius (Nemoicus) oblongus (Linnaeus, 1758)
350

DIS: Eur. BIO: beating various broad-leaved trees.

1979 – 1986: Fil'akovo: 28.v.86; Ragáč: 30.v.80.
2011 – 2016: Antalka: 29.v.15, 7 ♂♂ 7 ♀♀; Belina: 19.iv.15, 9 ♂♂ 5 ♀♀ (*Ulmus minor*); 1.v.14, 4 ♂♂ 1 ♀; Bizovo: 21.v.12, 1 ♀; Čamovce: 29.iv.11, 1 ♀; Dolná Baba: 31.v.15, 4 ♂♂ 7 ♀♀; Dúžava: 19.v.15, 8 ♂♂ 8 ♀♀; 7.vi.16, 1 ♀; Gemerské Dechtáre: 1.v.14, 4 ♂♂ 5 ♀♀ (*Acer campestre*); Gemerský Jablonec: 19.iv.15, 1 ♂ 3 ♀♀; 20.iv.16, 2 ♂♂ 1 ♀; 27.iv.13, 1 ♂; 24.v.13, 1 ♂ 1 ♀; Hostice: 4.v.13, 1 ♂ 3 ♀♀; Janice: 20.iv.16, 5 ♂♂ 9 ♀♀ (*U. minor*); 4.v.13, 3 ♂♂ 2 ♀♀; 13.v.15, 1 ♀; 6.vi.15, 1 ♂ 2 ♀♀; Jesenské-Barta: 20.v.15, 1 ♂ 5 ♀♀; Jestice: 9.vi.14, 2 ♀♀; 27.iv.13, 4 ♂♂ 2 ♀♀; Lipovany: 21.iv.16, 3 ♀♀; Lukva: 20.iv.16, 9 ♂♂ 7 ♀♀; Obročná: 2.v.14, 3 ♂♂ 2 ♀♀; Pohanský hrad: 21.iv.16, 9 ♂♂ 9 ♀♀; 6.vi.16, 2 ♀♀; 11.vi.11, 1 ♂ 2 ♀♀; Rapovce: 21.iv.16, 2 ♂♂ 4 ♀♀; Vlkyná: 12.v.12, 2 ♂♂ 3 ♀♀.

Phyllobius (Phyllobius) betulinus (Bechstein & Scharfenberg, 1805) 350

DIS: Eur. BIO: beating various trees.

2011 – 2016: Antalka: 29.v.15, 1 ♂ 2 ♀♀; Belina: 1.v.14, 1 ♀; Dúžava: 19.v.15, 1 ♀; 7.vi.16, 6 ♂♂ 6 ♀♀; Lukva: 20.iv.16, 1 ♀; Pohanský hrad: 6.vi.16, 1 ♀; Steblová skala: 13.v.11, 1 ♂; Šíd: 10.vi.11, 4 ♀♀.

- Phyllobius (Phyllobius) pyri* (Linnaeus, 1758) 351
 DIS: EuA. BIO: beating various trees, preferably Rosaceae.
 1979 – 1986: Matrač: 3.vi.82; Ragáč: 9.v.79.
 2011 – 2016: Belina: 28.iii.14, 3 ♂♂; 19.iv.15, 1 ♀; 1.v.14, 1 ♂; Bizovo: 12.v.12, 1 ♀; Čamovce: 29.iv.11, 2 ♂♂ 1 ♀; Dúžava: 19.v.15, 1 ♂; Gemerské Dechtáre: 1.v.14, 5 ♂♂ 4 ♀♀; Gemerský Jablonec: 19.iv.15, 2 ♂♂; 20.iv.16, 1 ♂; Hostice: 26.iii.14, 1 ♂; 4.v.13, 3 ♂♂ 1 ♀; Janice: 20.iv.16, 7 ♂♂ 6 ♀♀ (*Ulmus minor*); 4.v.13, 3 ♂♂ 2 ♀♀; 12.v.12, 1 ♀; 19.v.15, 1 ♂ 2 ♀♀; Jestice: 18.iv.15, 2 ♂♂; 27.iv.13, 9 ♂♂ 2 ♀♀; 31.v.15, 1 ♀; Lipovany: 21.iv.16, 5 ♂♂ 4 ♀♀; Ľukva: 20.iv.16, 10 ♂♂ 7 ♀♀; Matrač: 29.iv.11 1 ♂ 3 ♀♀; Obručná: 2.v.14, 1 ♂ 2 ♀♀; Pohanský hrad: 21.iv.16, 3 ♂♂ 4 ♀♀; Rapovce: 21.iv.16, 1 ♀; Steblová skala: 8.vi.16, 2 ♀♀; Vlkyňa: 12.v.12, 1 ♂.
- Phyllobius (Phyllobius) seladonius* Brullé, 1832 352
 DIS: Eur. BIO: mostly beating *Quercus cerris*.
 1979 – 1986: Fiľakovo: 28.v.86; Hajnáčka-Hangoň: 12.vi.83; Matrač: 3.vi.82; Ragáč: 12.vi.83.

Lixus (Broconius) rubicundus Zoubkoff, 1833 445
DIS: WPa. BIO: sweeping in ruderal habitats with *Atriplex* sp.
1979 – 1986: Matrač: 3.vi.82.

2011 – 2016: Gemerský Jablonec: 18.vii.13, 1 ♂ 1 ♀; Vlkyná: 15.viii.13, 1 ♂.

Lixus (Compsolixus) ochraceus Boheman, 1842 446
DIS: Pal. BIO: general sweeping, sifting in mesophilous habitats.
EXT: Chrámec: 25.iv.08; Stará Bašta: 6.v.07; Tachty: 18.viii.12 (all data PL leg. coll., KY det.).
1979 – 1986: Steblová skala: 13.viii.83.
2011 – 2016: Gemerské Dechtáre: 1.v.14, 1 ♀; Petrovce-Paberky: 18.vii.14, 1 ♀; Višňové: 23.x.15, 1 ♂ (sifted).

Lixus (Dilixellus) bardanae (Fabricius, 1787) 447
DIS: WPa. BIO: no data.
EXT: Petrovce: 7.v.07 (PL leg. coll., KY det.).

Lixus (Dilixellus) fasciculatus Boheman, 1835 447
DIS: EuA. BIO: almost exclusively sweeping *Artemisia vulgaris*.

EXT: Gemerský Jablonec: 7.v.07 (Dvořák leg. coll., KY det.); Stará Bašta: 6.v.07 (Plecháč leg. coll., KY det.).
2011 – 2016: Ľukva: 6.vi.15, 1 ♂ 1 ♀ (*A. vulgaris*); 19.vii.14, 1 ♂ (*A. vulgaris*); Malý Belež: 20.v.15, 1 ♀; Šíd: 10.vi.11, 4 ♂♂ 3 ♀♀; Višňové: 30.v.15, 2 ♂♂ 1 ♀ (*A. vulgaris*).

Lixus (Dilixellus) pulverulentus (Scopoli, 1763) 447
DIS: WPa. BIO: sweeping Cardueae.
1979 – 1986: Ragáč: 30.v.80; 12.vi.83.
2011 – 2016: Gemerský Jablonec: 6.vi.16, 2 ♀♀; Janice: 12.v.12, 1 ♂ 1 ♀; Ľukva: 24.vi.15, 1 ♀; Tachty: 5.vi.16, 3 ♂♂ 3 ♀♀; Višňové: 24.vi.15, 1 ♀.

Lixus (Dilixellus) punctiventris Boheman, 1835 447
DIS: WPa. BIO: general sweeping.
1979 – 1986: Fil'akovo: 28.v.86.

Lixus (Epimeces) cardui Olivier, 1807 448
DIS: WPa. BIO: individual collecting exclusively on *Onopordum acanthium*.
EXT: Pohanský hrad: 6.v.07 (KP leg. coll., KY det.).

2011 – 2016: Gemerský Jablonec: 6.vi.15, 1 ♂ 1 ♀ (*O. acanthium*); 10.vi.14, 1 ♂ 1 ♀ (*O. acanthium*); Tachty: 5.vi.16, 1 ♂ 1 ♀.

Lixus (Epimeces) filiformis (Fabricius, 1781) 448
DIS: WPa. BIO: sweeping Cardueae.

1979 – 1986: Jesenské-Barta: 3.vi.83; 17.vi.85; Steblová skala: 9.vi.81.

2011 – 2016: Gemerský Jablonec: 6.vi.15, 1 ♂ 1 ♀; 6.vi.16, 2 ♂♂ 2 ♀♀; 28.vi.13, 1 ♂ 1 ♀; Ľukva: 6.vi.15, 1 ♂; 24.vi.15, 3 ♂♂ 4 ♀♀; Matrač: 29.iv.2011, 1 ♀; 21.v.12, 1 ♂; Ožďany: 23.vi.12, 1 ♀; Tachty: 5.vi.16, 3 ♂♂ 2 ♀♀; Višňové: 24.vi.15, 1 ♀.

Lixus (Eulixus) iridis Olivier, 1807 449

DIS: Pal. BIO: exclusively on *Conium maculatum*.

1979 – 1986: Fil'akovo: 28.v.86; Ragáč: 21.vii.79.

2011 – 2016: Janice: 9.vi.14, 1 ♀; Ľukva: 6.vi.15, 1 ♂; Matrač: 21.v.12, 1 ♂ 1 ♀; Tachty: 9.viii.14, 1 ♂; Višňové: 30.v.15, 1 ♂.

Lixus (Eulixus) lateralis (Panzer, 1789) 449

DIS: Eur. BIO: on *Lepidium campestre* (L.) W. T. Aiton (1 spec. ex larva).

EXT: Gemerský Jablonec: 10.v.1999, 2 spec. (BT det. coll.).

Note: This species was reported as a new faunistic record for Slovakia by Benedikt et al. (2010) without any details. Later, the authors specified this datum as reported above.

Lixus (Eulixus) punctirostris Boheman, 1842 449

DIS: Eur. BIO: under *Berteroia incana* or crawling on the ground nearby.

EXT: Tachty: 28.v.16 (BT leg. coll. det.).

1979 – 1986: Fil'akovo: 28.v.86.

2011 – 2016: Gemerský Jablonec: 27.iv.13, 1 ♀; 15.ix.16, 1 ♂; Malý Belež: 14.ix.16, 1 ♂ (*B. incana*).

Lixus (Ortholixus) angustus (Herbst, 1795) 450

DIS: Eur. BIO: general sweeping, crawling on the ground.

EXT: Hajnáčka: 1.v.01 (Ryšánek leg., Jurčíček coll., KY det.); Jesenské: 3.v.02 (KY leg. coll. det.); Petrovce: 11.iv.08 (Plecháč leg. coll., KY det.).

1979 – 1986: Ragáč: 30.v.80.

2011 – 2016: Gemerský Jablonec: 19.iv.15, 1 ♀; 4.v.13, 1 ♂; Malý Belež: 14.ix.16, 1 ♀; Matrač: 28.vii.12, 1 ♀.

Lixus (Ortholixus) bituberculatus Smreczyński, 1968 450 (Fig. 36)

DIS: Eur. BIO: exclusively sweeping *Cichorium intybus*.

EXT: Jestice: 24.ix.11; Stará Bašta: 8.ix.13 (both leg. coll. PN, KY det.).

2011 – 2016: Belina: 1.v.14, 1 ♂; Gemerský Jablonec: 16.vii.14, 1 ♂; Petrovce: 15.viii.13, 3 ♀♀; 23.viii.13, 1 ♂.

Note: This species was recently reported as new for Slovakia (Stejskal & Trnka, 2014).

- Lixus (Ortholixus) cinerascens* Schoenherr, 1832 450
 DIS: Eur. BIO: sweeping *Crepis foetida*.
 EXT: Stará Bašta: 8.ix.13 (PN leg. coll., KY det.).
 2011 – 2016: Gemerský Jablonec: 18.vii.14, 2 ♂♂ (*C. foetida*); 29.viii.14, 1 ♀ (*C. foetida*); Malý Belež: 14.ix.16, 1 ♂ 2 ♀♀ (*C. foetida*); Tachty: 8.viii.15, 2 ♀♀; 9.viii.14, 1 ♂; 17.viii.14, 6 ♂♂ 2 ♀♀; 28.viii.14, 6 ♂♂ 2 ♀♀ (*C. foetida*); 28.viii.15, 2 ♂♂.
- Lixus (Ortholixus) tibialis* Boheman, 1842 450
 DIS: WPa. BIO: exclusively sweeping *Hieracium umbellatum*.
 EXT: Gemerský Jablonec: 22.v.11 (Koloničný leg. coll., KY det.); Hodejov: 7.v.10 (Ouda leg. coll., KY det.); Petrovce: 28.ix.12 (KY leg. coll. det.).

DIS: EuA. BIO: beaten from *Pinus sylvestris*.

2011 – 2016: Hostice: 26.iii.14, 1 ♂.

Trachodes (Trachodes) hispidus (Linnaeus, 1758) 490

DIS: Eur. BIO: sifting in Querceto-Carpinetum.

1979 – 1986: Fil'akovo: 7.viii.82; 5.x.84; Jesenské-Barta: 30.iii.84.

2011 – 2016: Dúžava: 10.vii.16, 1 ♂; Steblová skala: 16.x.11, 1 ♂.

Zoogeographical composition of species

Out of the total 540 recorded species 180 (33.3 %) belong to the European faunistic element, the second most common element is with 138 (25.6 %) species the Eurasian element. Other faunistic elements in descending order are: West Palaearctic (131 spp. = 24.3 %), Palaearctic (67 spp. = 12.4 %), Holarctic (20 spp. = 3.7 %), and worldwide distributed species (1 sp. = 0.2 %). Only 3 species (*Otiorhynchus respersus*, *Exomias interpositus*, *E. liptoviensis*) are subendemic (0.6 %) (Fig. 30).

Assessment of effects of climate change

During the period 1979 – 1986, 339 species were evaluated. Out of them, 32 (9.4 %) met the criteria of "Southern" species. During the period 2011 – 2016, it was 437 species out of which 66 (15.1 %) were identified as "Southern". The hypothesis that the difference between numbers of "Southern" species is statistically significant was proven by the chi-square test at the significance level $p = 0.03733$, i. e., the difference is significant at $p < 0.05$ (Fig. 31).

Among range-expanding species recorded exclusively in the period 2011 – 2016, the following were recognized as especially important and confirming the assumption that the species spread northwards through the Pannonic basin up to Slovakia apparently due to climate change: *Ceratapion beckeri*, *Protaetia schoenherri*, *Mecinus circulatus*, *Sitona callosus* (Fig. 33), *Hypera cumana* (Fig. 34), *Larinus minutus* (Fig. 35), *Lixus lateralis*, *L. bituberculatus* (Fig. 36), *L. cinerascens*, *L. tibialis*.

Recently, many authors focused on insect species, especially pests, spreading northwards to new distribution areas, where they often cause substantial economical losses. Eickermann et al. (2014)

assessed the impact of climate change with future projections on the immigration of the weevil *Ceutorhynchus napi* Gyllenhal, 1837 into oilseed rape crops. Recently, a well-known North American pine pest, the scolytine *Dendroctonus ponderosae* Hopkins, 1902 was shown to be prone to spread northwards and cause considerable economic and ecological losses (Zhou et al. 2019). Also, moths can cause extensive defoliations in new northern distribution areas as shown on outbreaks of *Operophtera brumata* (Linnaeus, 1758) in birch forests in northern Norway by Jepsen et al. (2012). Thus, the impact of climate change has not only a biogeographic importance, but it plays a substantial role in the ecology as well as in the economy. The importance of climate change will surely grow in the future in all aspects.

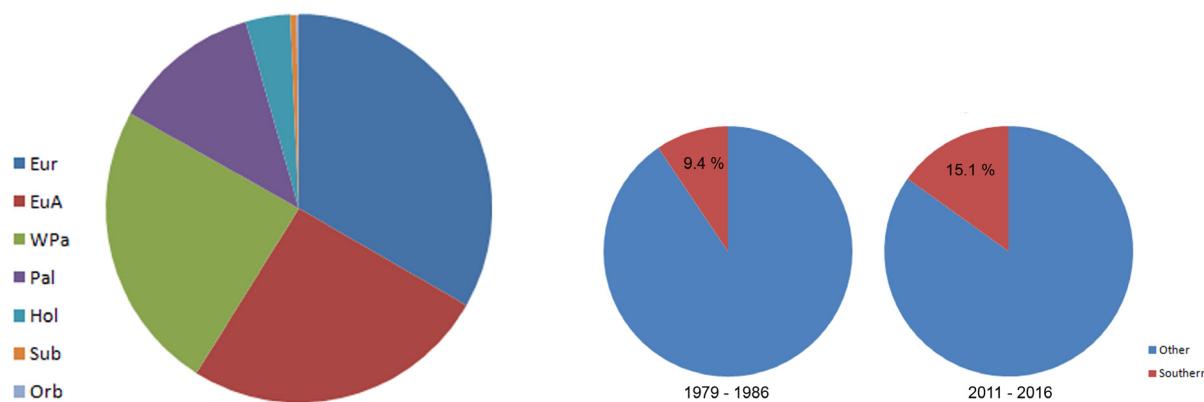

Figure 30. Composition of recorded species according to their zoogeographical characterization based on realms, regions, and subregions of their distribution. Eur = European, EuA = Eurasian, WPa = West Palaearctic, Pal = Palaearctic, Hol = Holarctic, Sub = Subendemic, Orb = worldwide.

Dominance

There were 438 species evaluated with regard to their dominance (self-collected on 28 study sites during the period 2011 – 2016). Out of them, 255 species reached the relative abundance 1 % and more at least on one study site. The top 80 species as their dominance is concerned are listed in Tab. 1. The most dominant species were *Protaetia fulvipennis*, *Phyllobius oblongus*, *Larinus obtusus*, *Nanophyes marmoratus*, *Eusomus ovulum*, *Nanophyes brevis*, and *Nedyus quadrimaculatus*. They are basically either common polyphagous species (*Protaetia*, *Phyllobius*, *Eusomus*) or common species associated with plant species or genera widely distributed in the area. Particularly both *Nanophyes* species being oligophagous on *Lythrum* spp. were very abundant on all study sites where the host plant occurred.

Figure 31. Comparison of the prevalence of "Southern" species in the study area between two main sampling periods.

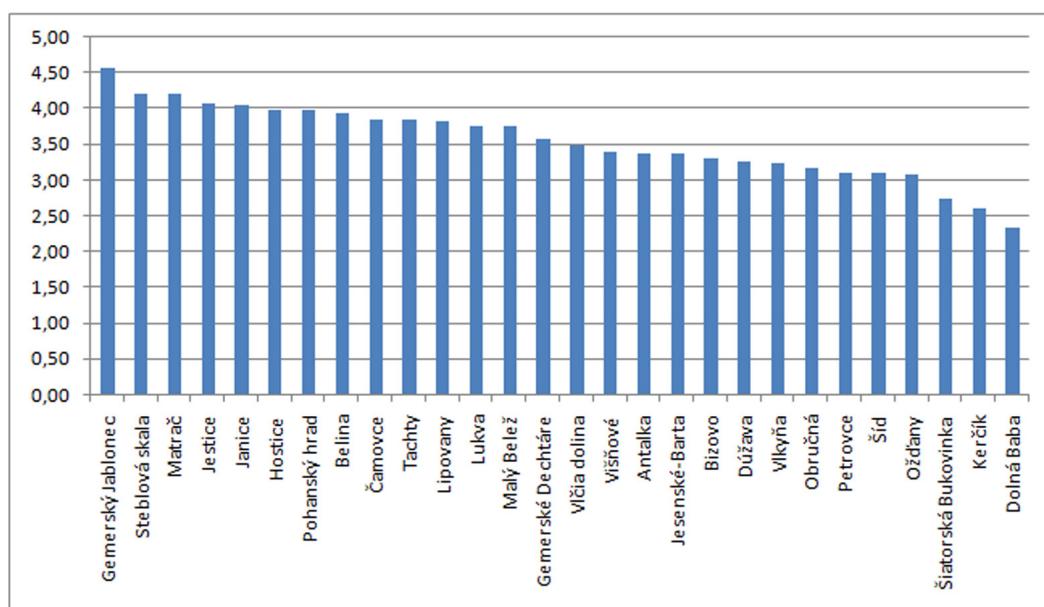

Figure 32. Comparison of the diversity on 28 study sites based on Shannon-Wiener Diversity Index (y). Study sites are ordered from left to right in the descending order.

Figure 33. *Sitona callosus* (male). Example of range-expanding species for the first time collected in Slovakia in 1991 and reported in 1994. Not to scale.

Figure 35. *Larinus minutus* (male). This species was recorded as a new for Slovakia in 2007. Not to scale.

Figure 34. *Hypera cumana* (male). Rare species expanding from the Pannonian basin. Not to scale.

Figure 36. *Lixus bituberculatus* (male). Rare monophagous species associated with *Cichorium intybus* recorded in 2014 as new for Slovakia. Not to scale.

Figure 37. *Cyphocleonus achates* (male). Xerothermophilous species associated with *Centaurea stoebe* very locally occurring also in south Moravia and south Slovakia. Not to scale.

Diversity

According to all indices used, study sites with a species-rich weevil fauna revealed the highest diversity, whereas sites with a smaller number of recorded species showed correspondingly lower diversity in all three indices. The equitability was in perfect accordance with all three indices (Tab. 2). Hence, when study sites were ordered according to the Shannon-Wiener Diversity Index, species-rich sites were those with the highest diversity (Fig. 32). Expectedly enough, species-rich sites with the highest diversity indices and equitability were characterised by the remarkably high biodiversity due to several types of biotopes on one study site (Gemerský Jablonec, Steblová skala, Matrač, Janice, Pohanský hrad) and/or by at least in some parts very well preserved ecosystems (Steblová skala, Matrač, Pohanský hrad, Jestice, Janice). Lower diversity was recorded on sites with just one type of biotope (Petrovce, Šíd) and/or with remarkably degraded, especially ruderalized biotopes (Kerčík, Dolná Baba).

Similarity

Similarities among all 28 involved sites are shown in Tab. 3. Study sites with semiprimeval and primeval steppe, and steppe-forest biotopes (Gemerský Jablonec, Matrač, Tachty, Jestice, Lukva, Janice) revealed the highest mutual similarities, often with values of Sorenson Similarity Index higher than 0.4 (> 40 %). These sites, in comparison with ruderalized or degraded localities (Dolná Baba, Kerčík), showed very low similarities, often less than 0.1 (< 10 %). Understandably, sites with hygrophilous habitats (Šíd, Ožďany) revealed low or moderate similarity to sites with xerothermophilous habitats.

ACKNOWLEDGEMENTS

I thank to S. Benedikt (Plzeň), R. Borovec (Slouňo), C. Fagerström (Häljarp), J. Krátký (Hradec Králové), P. Kresl (Spůle) and O. Majzlan (Bratislava) for additional collecting data from the studied area, to M. Holecová (Bratislava) for enabling me the access to some historical published data, to M. Wanat (Wroclaw) for the identifying of selected apionines, Z. Báborská (Brno) for her help in the field. My thanks are also due to E. Belanová, K. Gaállová, and V. Karola (Protected Landscape Area Administration Cerová vrchovina, Rimavská Sobota) for supporting my research, and to magistrates of District Authorities Banská Bystrica for providing me with the insect collecting permit No. 2011/00617-Pr including its extensions. Last but not least, thanks go to my wife Mária, who supported me tirelessly in the field.
